

MEMORANDUM

Public Works Department

DATE: January 28, 2022

TO: Mayor and Councilmembers

THROUGH: Steve McHarris, City Manager *Steve McHarris*

FROM: Tony Ndah, Public Works Director

SUBJECT: LED Streetlight & Parklight Project Update

This memorandum provides an update of the City's LED Streetlight and Parklight Conversion Project and Streetlight and Parklight outages.

Background

The City owns and operates approximately 4,400 streetlights and 800 parklights, a total of 5,200 lights. Over the last six years, initially through in-house staffing and then through contracted ENGIE Services U.S. (ENGIE), the City converted all street and parklights from outdated fixtures to energy efficient Light Emitting Diode (LED) lamps and control systems.

As reported on September 3, 2021, via email, the conversion to LEDs experienced delays primarily related to LED supply chain issues. These delays also impacted the assessment of 186 reported streetlight outages submitted by residents going back to Fiscal Year 2019-20 through the MyMilpitas app.

LED Streetlight and Parklight Conversion Project Update

With supply chain delays resolved, ENGIE completed the conversion of streetlights and parklights to LEDs as well as the installation of the smart streetlight communication system in early January 2022 except for some punchlist items. The smart streetlight communication system, which is expected to go live by March 2022, will enable the lights to be monitored by City staff remotely, provide real-time energy reporting and problem alerts, and facilitate streetlight maintenance.

As previously reported, LEDs use less energy resulting in reduced energy cost (estimated at \$324,000 annually) and reduced greenhouse gas emission reductions; have a longer life cycle (20 years) resulting in reduced maintenance cost (estimated at \$52,000 annually) and fewer outages due to failure of LED lamps.

Reported Streetlight and Parklight Outages Update and Next Steps

In addition to completing the LED Street- and Parklight Conversion project during the last three months, ENGIE also assessed the 186 street light outages reported through MyMilpitas App as of September 2021. Of the 186 reported outages, 125 street light outages, or 67%, were resolved. The remaining 61 streetlight outages require additional work pertaining to the installation of decorative acorn lights, were referred to PG&E to address power issues (26 light poles), and had other miscellaneous electrical issues, unrelated to the LED fixture itself.

Staff is awaiting delivery of 257 new decorative acorn lights for installation. Delivery is expected in the next few weeks and work we anticipate work to be completed by the end of February 2022. Further, staff has been following up with PG&E regarding the status of repair of the 26 streetlights. The remaining outages will be handled by ENGIE starting next week.

While ENGIE addressed 125 of the 186 outages since September 2021, residents and businesses submitted an additional 95 streetlight outage reports during the same period bringing the total of outstanding work orders to 156 as of January 20, 2022. The attached report provides the location of the street light outages, the description of the outage submitted by the resident, the date reported, the streetlight pole identification number and the work status.

In order to address the 156 outages identified in the report, staff has been working with ENGIE to complete punchlist items for the streetlight conversion project including the 156 known and reported streetlight outages. Tonight, ENGIE will be confirming the 95 newly reported outages and starting next week will make repairs, as needed, as well as troubleshoot other outages.

In addition to the 156 streetlight outages reported, staff are currently troubleshooting parklight outages from requests submitted through the MyMilpitas app. The majority of the requests submitted are for light outages at Hall Memorial Park. Staff has replaced sub-panels, main panels, relays, and clocks at the park to address the lighting issues and are awaiting parts to complete the replacement of obsolete equipment in order to restore the lights. Once the parts are delivered, which is expected in the next 2 weeks, staff will complete the repairs.

Conclusion

With the conversion of all street- and parklights to LEDs, implementation of the smart streetlight communication system, the work ENGIE is scheduled to complete, as well as escalating the PG&E street light repair work orders, we expect a significant reduction in the current number of street- and parklight outages, and will be positioned to troubleshoot new repairs far more effectively has due to reduced vehicles parked during sweeping times. Staff expects that the numbers will continue to increase through autumn and winter due to the increased amount of vegetation/leaves.

1288 Olympic Dr Milpitas, CA, 95035, USA	Hello Milpitas Works, The pole number M201 has been outage for over a month. It was first reported by my neighbor (1288 Olympic Dr.) The pole location is between 1276 and 1288 Olympic Dr. Not only it is a security concern, people also threw some trash on the street under the pole (thinking no one would see them under the dark nights), and I had to sweep trash many times already.	1/13/2022	M201	Pending field work
1973 Pace Way Milpitas 95035, United States	Hello, the streetlight by Pace and Trade Zone Blvd has been fallen over and broken for 3 months. Can you help to fix this? The Pedestrian cross walk signal is also missing and pedestrians are unable to press the button to cross the street.	4/11/2021		No power detected
2090 N Park Victoria Dr Milpitas, CA, 95035, USA	The light is very dim compared to the lights north and south of this light pole. It is located on a bend in the road and traffic flow is usually above the speed limit. It also makes the surrounding area very dark. Please fix as soon as possible.	9/27/2021	M3131	Pending field work
1137 Park View Dr Milpitas, CA, 95035, USA	The streetlight has been out for over 2 weeks. Aren't there sensors to show when the lights go out? Please replace as it is extremely dark and does not allow neighborhood to feel safe.	11/11/2021		Pending field work
718-898 Paseo Refugio Milpitas, CA, 95035, USA	Even after the installation of an LED street light M3322 still does not function.	12/12/2021	M3322	Pending field work

500–534 Penitencia St Milpitas CA 95035, United States	The cross walk at this intersection is very poorly lit. Especially on the bus stop side -It is very hard to see pedestrians in the evening and night. There is no light on the bus stop side or a flashing pedestrian crossing sign. People drive really fast on this street	1/7/2022	M1335	Pending field work
